Welcome to fdisk (util-linux 2.41.2).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

This disk is currently in use - repartitioning is probably a bad idea.
It's recommended to umount all file systems, and swapoff all swap partitions on this disk.

Command (m for help): shred -vfz -n 1 /dev/nvme1n1p2

Created a new partition 1 of type 'Linux native' and of size 974 MiB.
Created a new partition 2 of type 'Linux swap' and of size 50 MiB.
Created a new partition 3 of type 'Whole disk' and of size 1 GiB.
Created a new Sun disklabel.
The device contains 'gpt' signature and it will be removed by a write command. See fdisk(8) man page and --wipe option for more details.

Command (m for help):

Command (m for help):
zsh: suspended fdisk /dev/nvme1n1

(root@kali)-[/home/aluno/Documentos/MeuHD]
shred -vfz -n 1 /dev/nvme1n1p2
shred: /dev/nvme1n1p2: passagem 1/2 (random) ...
shred: /dev/nvme1n1p2: passagem 2/2 (000000) ...

(root@kali)-[/home/aluno/Documentos/MeuHD]
